(a) Factors affecting the Crystal Field Parameters :-

A number of factors influence the Crystal Field Splitting, they are as follows :-

(1) Nature of ligand :- The ligands having the more capacity to dissolution called strong ligand, while the ligand provides weak field on metal cation called weak ligand. By changing the nature of ligand the value of  $\Delta_0$  also changes. In this way, the ligands like  $\text{CN}^-$  have more value in complex & weak ligand like  $\text{F}^-$  have less value. In same ligand the splitting power in increasing order can be arranged. This series called spectrochemical series they are following :-

ANSWER

### RETURNS TO SCALE

The changes in output as a result of the variation in factor proportion forms the subject matter of the law of variable proportion.

In other words, the behavior of output in response to the changes in the scale. The proportionate change in both the factors being about a change in the scale. The term return to scale refers to the degree by which output changes as a result of a given proportionate change in the amounts of all factor used in production.
